

## Wheel Hangers for Acura Accelerated Service Lifts

To order replacement wheel hangers, several factors must be taken into consideration. The hangers have gone through several upgrades, so it must first be determined which version of them you have so the correct components can be furnished.

This is done by identifying the model year of your lift. The model year can be determined by obtaining the serial number from your lift's identification tag. The ID tag can be found on your lifts in the locations as indicated below.

Once you have obtained the serial number and recorded it, contact the Acura Tool and Equipment Program at 888-424-6857 and we will verify the appropriate replacement components needed for your lift.

### Serial Number Tag Location Sheet for Acura Accelerated Service Lift

Beginning 4/03, Rotary Lifts use a coded serial number, as follows : XXX01AXXXX

- First three digits (XXX) indicate lift model
- Next two numerals (01) indicate year
- The alpha character (A) indicates the month, i.e. A= 1<sup>st</sup> Mth, B=2<sup>nd</sup> Mth, C= 3<sup>rd</sup> Mth
- Last four digits represent the number of that model manufactured in that month.
